Subject: RE: Brennfloc info - DRMS stock

Matt,

The alternative material below is worth trying – with a small order – if we need an option to Brenfloc.

I spoke with Jeff and he has a partial pallet – 15 bags that we can have in for R n B and Gold King. In the meantime, let's find a supplier and figure out availability, delivery option, etc.

If you would, please make arrangements with Jeff Graves to get a truck over to the DRMS warehouse off Sherman St and 13th in Denver to get those bags (15) next week (8/11 wk). If you cannot make that happen next week, we'll need to coordinate with someone else in the DRMS the following week. (I am traveling both weeks.)

Thanks and let me know if you have questions.

Steve

Matt

I attached a copy of the tag from the bag which looks like it has all of the information on it you would need to follow-up. Also, I have had some contact with a supplier of a very similar product called superfloc A-130. The salesman is Steve Fabrizio, and he works for Interstate Chemical Company. I tried some of the Superfloc on a little bit of the Penn Mine water and it seemed to work pretty well, but we never went large scale with it because I already had the Brennfloc onsite. The Brennfloc has been a little harder to acquire for some of the contractors, so the superfloc might be the way to go. Feel free to let Steve Fabrizio know you talked to me, since he was very helpful in coming up with the appropriate floc for Penn.

Do you have any manufacturer (or other) info on Brennfloc? I might not even be spelling it correct because I'm really struggling to find much. EPA is considering using it and has asked me to look into application rates, pH limitations, etc.

Thanks

Matt
